

Kisii Eye Hospital: September 2020 Newsletter

Telemedicine

Kisii Eye Hospital is now offering telemedicine services as a pilot project. This has become necessary especially now during the Covid-19 pandemic.

Telemedicine Definition

Telemedicine can be defined as the use of technology (computers, video, phone, messaging) by a medical professional to diagnose and treat patients in a remote location.

Telemedicine allows health care professionals to evaluate, diagnose and treat patients at a distance using telecommunications technology. The approach has been through a striking evolution in the last decade and it is becoming an increasingly important part of taking care of patients during this Covid-19 period.

The rise of the internet age brought with it profound changes for the practice of telemedicine. The proliferation of smart devices, capable of high-quality video transmission, opened up the possibility of delivering remote healthcare to patients in their homes, workplaces or assisted living facilities as an alternative to in-person visits for both primary and specialty care.

Telemedicine is a convenient tool for everyone, but it's especially helpful if you:

- Live in a rural area or far from your doctor's office
- Have limited movement, time, or transportation
- Need medical care while you're away from home

How it works

At Kisii Eye hospital we offer telemedicine, all you need to use telemedicine is reliable internet and a phone, smartphone, or computer. To access it just go to our website and follow the instructions on the pop up that comes on the homepage.
